### **DETAILED ACTION**

This office action is responsive to the amendment filed 02/10/2005.

#### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 7, 8, and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Gautier et al (US Patent 5,148,182).

Gautier et al disclose, in figures 5 and 13, an antenna structure comprising a ground element 12, a dielectric 120 coupled to the ground element, figure 5, a pair of radiating strips (7,7) separated by a generally uniform gap, figure 13, and a plurality of varactor diodes 6, see column 4, lines 11-12, mounted in shunt across the gap.

#### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Gautier et al in view of Takei (US Patent 6,028,561).

The patent to Gautier et al, described above, differs from the claimed invention because it does not teach the variable capacitor. Takei discloses, in figure 1C, an

Art Unit: 2821

antenna device comprising a variable capacitor 6 coupled between the conductive strips 4 and 14, see column 5, lines 19-25. It would have been obvious at the time the invention was made to a person having ordinary skill in the art to employ the variable capacitor in the antenna device of Gautier et al for the purpose of obtaining the impedance matching as taught by Takei, column 2, lines 5-8.

### ***Allowable Subject Matter***

Claims 11 and 12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 1-6 and 13-18 are allowed.

### ***Response to Arguments***

Applicant's arguments filed 02/10/2005 have been fully considered but they are not persuasive. The applicant asserts that the patent to Gautier fails to disclose the limitation "a fixed frequency beam steerable leaky wave microstrip antenna" in claim 7. The examiner respectfully disagrees with the applicant's assertion because the limitation "a fixed frequency beam steerable leaky wave microstrip antenna" is considered a preamble and therefore it is not considered a patentable weight.

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within

Art Unit: 2821

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
